Scope

University Internship & Industry Matching Portal

Project Scope Document

---

1. Project Title

University Internship & Industry Matching Portal with Project, Startup & Competition Participation System

---

2. Project Overview

The University Internship & Industry Matching Portal is a centralized web-based platform designed to connect university students with verified companies offering internship opportunities while also supporting internal university projects, startups, and academic or industry competitions.

The system streamlines internship discovery, application, recruitment workflow, and participation in university-led innovation initiatives and competitions. Internship opportunities are verified and published through the university administration to ensure authenticity and quality.

Students who are not selected for internships are given opportunities to gain experience through university projects, research initiatives, startups, and competitions.

The platform operates through three main portals:

- Student Portal
- Company Portal
- Admin Portal

System functionality is mainly organized into two main content areas:

- Internships Page
- Projects & Competitions Page

---

3. Objectives

- Provide verified internship opportunities to students.
- Simplify recruitment processes between companies and students.
- Digitize internship applications and interview workflows.
- Allow universities to monitor student placements and participation.
- Provide alternative experience opportunities through projects and startups.
- Enable students to discover and participate in competitions.
- Encourage research, innovation, and student entrepreneurship.

---

4. Target Users

- Students
- Companies / Recruiters
- University Administrators
- Faculty Members / Project Supervisors
- Startup or Project Leaders
- Competition Organizers

---

5. System Portal Structure

5.1 Student Portal

Students can:

- Register and manage profiles
- Upload resumes and academic details
- Browse internship opportunities

- Apply for internships
- Track application status
- Receive interview notifications
- Manage application dashboard
- Browse projects and startups
- Apply to participate in projects
- Discover competitions
- Apply/register for competitions
- Track participation status

5.2 Company Portal

Companies can:

- Register company accounts
- Submit internship opportunities for admin approval
- View student applications
- Review and download resumes
- Accept or reject applicants
- Shortlist candidates
- Schedule interviews or meetings with applicants
- Update recruitment status

Companies interact with applicants but internship postings are published through admin approval.

5.3 Admin Portal

Administrators can:

- Approve company registrations
- Create and publish internship postings

- Verify internship opportunities
- Manage users and roles
- Monitor platform usage
- Remove invalid or fake listings
- Generate placement reports
- Approve and manage projects and startups
- Approve competition postings
- Monitor student participation analytics

---

6. Internship Module

Internships are added and managed by administrators after verifying opportunities submitted by companies or industry partners.

6.1 Application Tracking System

Each internship application follows a recruitment pipeline:

```
Applied → Shortlisted → Interview Scheduled → Selected / Reje
cted
```

Both students and companies can track updates in real time.

6.2 Interview Scheduling System

Supports:

- Interview slot creation
- Student slot booking
- Notification delivery
- Online meeting link attachment

6.3 Resume & Document Storage

Students can upload:

- Resume
- Cover letters
- Academic records
- Certificates

Companies can securely download candidate documents.

---

7. Projects & Startup Participation Module

7.1 Purpose

Students rejected from internships are offered alternative opportunities through university-led projects, startups, and research initiatives to gain practical experience.

7.2 Project Creation

Projects may be created by:

- Faculty members
- Research teams
- Student startups
- Innovation labs
- University departments

Project details include:

- Description
- Required skills
- Duration
- Team size
- Mentor or leader information

- Project category (Research, Startup, Product Development, etc.)

7.3 Participation Requests

Students can:

- Browse available projects
- Apply to participate
- Submit portfolios or proposals
- Join teams as developers, researchers, designers, etc.

7.4 Project Leader Functions

Project leaders can:

- View applicants
- Accept or reject participants
- Assign project roles
- Monitor team progress

7.5 Participation Tracking

The system records:

- Project involvement duration
- Roles and contributions
- Skills gained
- Certificates or acknowledgements

---

8. Competition Discovery & Participation Module

8.1 Purpose

Students often miss opportunities to participate in academic and industry competitions due to lack of centralized information. This module allows students

to discover and apply for competitions hosted by universities, student organizations, and external partners.

Examples include coding competitions, AI challenges, hackathons, innovation contests, and research competitions.

8.2 Competition Posting

Competitions can be posted by:

- University departments
- Student organizations
- Innovation centers
- External academic or industry partners
- Competition coordinators

Competition details include:

- Competition name
- Organizer details
- Description
- Eligibility criteria
- Application deadlines
- Required skills or domains
- Registration or submission links
- Competition timeline

8.3 Student Functions

Students can:

- View upcoming competitions
- Filter competitions by domain or skill
- View deadlines and requirements

- Apply or register
- Track competition participation

8.4 Admin Functions

Admins can:

- Approve competition postings
- Manage competition listings
- Remove outdated events
- Monitor participation statistics

---

9. Updated Opportunity Flow

```
Internship Application
        ↓
Applied → Shortlisted → Interview → Selected
        ↓
     Rejected
        ↓
Project / Startup Participation
        ↓
Competition Participation Opportunities
```

Students therefore always have pathways to gain experience even after internship rejection.

---

10. Advanced Features (Future Scope)

Potential enhancements include:

- Internship recommendation system
- Skill matching engine
- Resume scoring

- Participation analytics
- AI-based resume screening
- Startup funding and incubation tracking
- Contribution scoring
- Competition performance tracking

---

11. Non-Functional Requirements

The system should ensure:

- Secure authentication and authorization
- Data privacy protection
- Fast search and processing performance
- Scalability for large student populations
- Mobile responsiveness
- Backup and recovery mechanisms

---

12. Out of Scope (Initial Version)

- Full employment/job recruitment system
- Payroll or salary management
- Academic grading systems
- Learning management modules

---

13. Expected Outcomes

- Increased verified internship access
- Transparent recruitment workflows
- Improved student employability
- Stronger university–industry collaboration

- Enhanced innovation through projects and competitions

---

14. Possible Technology Stack

Example technologies:

- Frontend: Angular / React
- Backend: Spring Boot / Node.js
- Database: MySQL / PostgreSQL
- Cloud Storage: AWS / Azure
- Authentication: JWT / OAuth
